EDUCATION

De La Salle University - Manila

September 2023 – August 2027

BS Computer Science major in Software Technology

- **CGPA:** 3.941 (Summa Cum Laude Standing)
- **Awards:** Consistent First Honors Dean's Lister

TECHNICAL SKILLS

- **Languages:** Python, JavaScript/TypeScript, SQL, Java, Kotlin
- **Frameworks & Tools:** React, Next.js, NestJS, PyTorch, TensorFlow, scikit-learn, MySQL, MongoDB, Docker

WORK / INTERNSHIP EXPERIENCE

Aboitiz Foods

February 2026 – April 2026

Software Engineer Intern

- Created a contract management platform using React, NestJS, and MySQL for end-to-end tracking.
- Designed a scalable MySQL database to dynamically filter data across complex organizational hierarchies.
- Built automated document processing for uploading and downloading docx contract templates.
- Developed a contract review workflow featuring automated lawyer email notifications and sharing links.

JJ Apartments

September 2025 – December 2025

Product Owner & Technical Lead

- Led a 7-member Agile team, managing sprints and feature development for a property management app.
- Built a CI/CD pipeline and deployed Next.js, Spring Boot, and MySQL services across Vercel and Render.
- Delivered multiple new app features, strengthened authorization, and improved system reliability.

Aboitiz Foundation Inc.

August 2025 – October 2025

Impact Jobs Intern

- Conducted outreach to 275+ program graduates for beneficiary data collection and validation.
- Performed Excel-based data analysis and labor market research to present findings to stakeholders.

Sharelife Consumers Cooperative

May 2025 – August 2025

Quality Assurance (QA) & Developer

- Developed 100+ test cases and end-to-end tests using Cypress for DBMS admin application reliability.
- Fixed critical frontend bugs and implemented features using Next.js, TypeScript, and Supabase.
- Authored technical documentation for the admin system to ensure maintainability and smooth handovers.

Bids n Buys

February 2025 – July 2025

Junior Blockchain Developer (Started as Intern)

- Developed an Angular crypto wallet application with Jest and Cypress unit and E2E testing.
- Built a serverless TypeScript API on AWS Lambda with MongoDB for e-commerce invoicing.
- Managed Cardano nodes via Docker Swarm and built a MongoDB-backed crypto funding system.
- Created a Merkle-proof verification system submitting hashes to the Cardano blockchain for integrity.

PERSONAL & ACADEMIC PROJECTS

WESM Price Prediction (Python, scikit-learn, PyTorch, TensorFlow)

- Built an end-to-end ML pipeline to predict Philippine electricity spot prices, benchmarking 5 model types across regression and classification.
- Best models achieved strong performance for price prediction and ROC-AUC $\approx$ 0.95 for detecting price spikes.

RFPScout (Python, GPT-4o, SQLite)

- Built an AI agent pipeline for nonprofit RFP discovery, extracting data, scoring relevance, and drafting outreach.
- Engineered a modular search→extract→rank→draft workflow with deduplication and persistent storage (SQLite), achieving sub-5-minute runtime across sources.
